I am excited to learn more about the Co-op or Intern position at BDO Canada's GTA Office, as it aligns with my passion for delivering high-quality service and my strong problem-solving skills.

As a Computer Science student at the University of Waterloo, I am eager to apply my technical knowledge to real-world projects and assignments. My experience as an Applications Development Intern at Rheinmetall, where I worked on creating Power Apps solutions and a .NET backend, has given me a solid foundation in software development. Additionally, my Digital Transformation and Software Testing Internship at Ericsson has honed my skills in monitoring software pipelines and troubleshooting Kubernetes clusters.

One project that I am particularly proud of is the POS Ecosystem Web and Mobile, where I developed a React web dashboard and a React Native mobile point of sale app. The backend uses FastAPI and PostgreSQL, and I implemented Python machine learning models and web scraping for sales and pricing recommendations. This project has not only deepened my understanding of software development but also taught me the importance of collaboration and effective communication.

I am impressed by BDO Canada's commitment to providing an environment that fosters personal and professional growth, as well as its people-first approach to talent. I am excited about the opportunity to join a team that values integrity, respect, and collaboration, and I am confident that my strong problem-solving skills and passion for delivering high-quality service would make me a valuable asset to the Assurance & Accounting team.

I would be thrilled to discuss this opportunity further and learn more about the team's work. Thank you for considering my application.
